

B BRAUN MEDICAL www.bbraun.com

Value Added IV Set Packaging B.Braun is a significant manufacturer of high quality IV therapy products and services in the US and abroad. A major portion of their IV therapy offerings are disposable IV sets. The role of the packaging is to keep the IV set sterile prior to the point of use, as well as to protect it from damage during transit. It also typically is used to convey instructions for use to the customer. The set is typically coiled inside the blister, often with a paper band.

B.Braun has recorded several specific concerns with the presentation of IV sets to customers.

B.Braun will provide engineering guidance, marketing information, and general direction for your project. The project is intended to be open ended to allow you to exercise your creativity. They look forward to Sharing Expertise with you!
