

LIFESERVE INNOVATIONS ®, LLC Student Entrepreneur Venture

Facemask for Oxygen Delivery LifeServe Innovations®, LLC is a medical device start-up company formed at Lehigh University in 2008 by three undergraduate students supported by an extensive network of surgeons, paramedics, and faculty, and the IPD program. LifeServe is currently developing the SMART Kit, an innovative new method for the performance of emergency tracheotomies.

LifeServe is looking for motivated and intelligent business, engineering and design students interested in working in the start-up environment with medical professionals to develop LifeServe's newest product: the next generation facemask for oxygen delivery and ventilation. Proper ventilation is the most vital element in caring for a critical patient and the facemask is a critical component of any ventilation system. Current facemasks have many issues that can sometimes result in improper ventilation and life-altering, debilitating complications such as brain injury and death. LifeServe hopes to rectify this problem by developing and commercializing an innovative facemask.
