Instructional Technology

Spyro Roubos

4/5/2011

There are three components to this talk:

1. CourseCompass - We will briefly explore this homework system, at least the essentials needed to use it for those considering teaching over the summer at NCC or LCCC.

2. WeBWorK - We will log onto 'my' course exploring the coding of a few sample homework problems. Furthermore, you will create a given calc homework problem, view it, and try it yourself.

3. TurningPoint - We will look at and test software that goes hand-in-hand with Power-Point. This works with a set of remotes and uses solicited responses with remotes to actively display results in PowerPoint.

Note: Having a laptop is strongly preferred! You need not have CourseCompass or Power-Point.
