

Year: 2006 Month: 8

Station moved to lake center from shallow water (ca. 2.5m max) at dock on 5 May 2006
 See figure to right for actual depths of temperature sensors when weather station is in shallow water.

Lake level is mm above lower edge of dock metal frame (mm of water at 4°C based on pressure)
 Monthly rain to date: 5.1 inches

Precip from rain gage is underestimated during freezing conditions and appears late when air temperature rises above freezing. Lake rise reflects rain or the water equivalent of snow, plus runoff and snowmelt.
