

Year: 2009 Month: 4

Station moved from dock from 2:30-3:30pm (problems with ice-shift anchors result in wind direction error until corrected)
See figure to right for actual depths of temperature sensors when weather station is in shallow water.

Tw12m sensor damage noted on 21Apr07 (animal bite through outer insulation near bottom); will need to replace it but currently it's working again

Lake level is mm above lower edge of dock metal frame (mm of water at 4°C based on pressure)
Monthly rain (incl melt in gage): 2.27 inches [bar] 1.8 in. (incl. winter frozen precip) from Avoca NWS Dock upper surface is at about +200 mm at SE corner but about +100 at NW corner

Precip from rain gage is underestimated during freezing conditions and appears late when air temperature rises above freezing. Lake level rise accurately reflects rain or the water equivalent of snow, plus runoff and snowmelt.

accuweather (Avoca)	1-Apr	2.29	2.20	11-Apr	0.76	0.20
rain or water-equiv snow, mm	3-Apr	10.92	20.60	14-Apr	3.56	2.20
	4-Apr	0.25	2.00	15-Apr	0.508	0.90
	6-Apr	4.83	5.80	20-Apr	6.096	9.60
	10-Apr	1.78	1.90	21-Apr	7.874	10.30

-	Avoca total precip,mm	38.9	
-	rain gage to date,mm	57.7	148%
