

Jonathan J. Wierer, Jr., Ph.D.

Jonathan Wierer is an Associate Professor at Lehigh University in the Department of Electrical and Computer Engineering and Center for Photonics and Nanoelectronics. His research interests include semiconductor device physics and semiconductor materials science. Specifically, he has made seminal contributions in III-nitride electronic and optoelectronic devices. His career and research experience are unique, in that it has been performed across various organizations (university, industry, and a national laboratory), and has exposed him to different perspectives on semiconductor device research. This research has resulted in both a lengthy patent portfolio and highly reference journal articles.

Jonathan received his M.S., B.S., and Ph.D. from the University of Illinois at Urbana-Champaign in electrical engineering in 1994, 1995, and 1999, respectively. His Ph.D. advisor was Nick Holonyak, Jr., and his thesis was employing tunnel junctions in InGaAs light emitters. This was the first-time tunnel junctions were used in LEDs and laser diodes, and this enabled efficient rerouting of currents and the removal of absorptive p-type layers. This method now enables vertical-cavity surface-emitting lasers emitting in the near-infrared, and it is also being developed for III-nitride ultraviolet and visible LEDs.

After his doctorate, he joined Hewlett-Packard (later Lumileds Lighting) researching novel III-nitride light-emitting diodes (LEDs). He worked with the team that produced the world's first high-power (1 Watt) III-nitride flip-chip LEDs (FCLEDs). These illumination grade LEDs were drastically different from indicator LEDs and are arguably the light sources that began solid-state lighting (SSL). Jonathan was a key contributor to the research and development of FCLEDs, and he led them into successful manufacturing. Today most high-power LEDs are some variation of his original FCLED.

Later at Lumileds, he joined the Advanced Laboratories pursuing high risk, and long-term LED research. There he primarily investigated photonic crystal LEDs. His seminal papers on photonic crystal LEDs demonstrated the ability to control emission patterns and demonstrated records in extraction efficiency. Some of his most cited and patented work is his photonic crystal LED research.

In 2008 he joined Sandia National Laboratories, and his interests broadened to include III-nitride research on laser diodes (LDs) for SSL, solar cells, intersubband devices, power electronic devices, and ultraviolet-emitting LEDs. Most notable is his ground-breaking work on proposing LDs as an ultra-efficient light source for SSL. His critical insight is that LDs can circumvent the decrease in efficiency that occurs in III-nitride LEDs (efficiency droop). This work began more substantial research efforts into this area by other researchers and companies.

At Lehigh University he is continuing his research on semiconductor device physics and materials. He has several efforts on light-emitters for SSL and displays. This work includes investigating quantum dot active layers as a method to overcome Auger recombination to create higher efficiency LEDs and laser diodes. Here his group has demonstrated a synthesis method that creates controlled ensembles of QDs where the QD's energies are in a narrow distribution. He has also been researching long-wavelength visible (green to red) InGaN LEDs using AlGaN interlayer quantum well designs. This work has revealed that a tensile AlGaN interlayer is a means to control the compressive strain of InGaN quantum wells and prevent defect formation for higher efficiencies. Another research area Jonathan is pursuing is new wide-bandgap power electronic devices with III-nitride semiconductors. The wide bandgap leads to higher critical electric fields and higher breakdown voltages. This power device work includes investigating novel edge termination schemes and ultra-wide bandgap III-nitride semiconductors such as AlGaN and AlInN. One exciting result of this work is the oxidation of AlInN using thermal wet oxidation to form native AlInO layers. This new native oxide has the potential to create new device architectures similar to the oxides of Si and AlGaAs.

Dr. Wierer has authored or co-authored over 180 journal publications and conference presentations and holds 41 patents, predominately related to III-nitride devices. He is an associate editor for IEEE Photonics Technology Letters. He is a senior member of the Institute of Electrical and Electronics Engineers and the Optical Society of America, and a member of Illumination Engineering Society and the International Society for Optics and Photonics.

Spring 2018	ECE 126	3	29	4.74	4.78	4.82

Notes: Evaluations are not performed for instructors in ENGR 5.

Answers are on a scale of 1-5 with 5 the highest

Question 1: Overall, the instructor's teaching was effective.

Question 2: Overall, the quality of the course was good.

Question 14: I learned a great deal in this course.

Notes:

Spring 2020 scores were not given due to online learning/COVID-19.

Answers are on a scale of 1-5 with 5 the highest

Question 11: Instructor presented content in an organized manner.

Question 12: The instructor's teaching methods contributed to my understanding of the course material.

Question 13: The instructor was responsive when I had difficulties or questions.

Question 14: The instructor gave me constructive feedback.

Question 15: The instructor's assignments (i.e. projects, homework, papers, etc.) provided opportunities for participative learning within the course.

Question 16: The course increased my knowledge of the subject matter.

Advising

Current graduate research students:

1. Matt Peart
Research topic/Thesis: "III-nitride power electronic devices",
Duration: June 2016- expected PhD graduation date of Dec 2020
2. Xiongliang Wei
Research topic/Thesis: "Monodisperse III-nitride quantum dots",
Duration: June 2016-expected PhD graduation date of May 2021
3. Syed Ahmed Al Mueyed
Research topic/Thesis: "Green-red emitters with III-nitride interlayer active regions"
Duration: Sept 2016- expected PhD graduation date of Dec 2020
4. Elia Palmese
Research topic/Thesis: "III-nitride power transistors"
Duration: Sept 2019- expected PhD graduation date of Dec 2024
5. Jing Xue
Research topic: "Frequency response of micro-LEDs"
Duration: Jan 2020- expected MS graduation date of Jan 2021
6. Daniel Rogers
Research topic:" Efficient red III-nitride emitters"
Duration: Sept 2020- present

Current undergraduate researchers:

1. Sydney Wisniewski
Duration: Summer 2019 – present

Master's student supervised:

1. Matt Peart
Research topic/Thesis: "The Faraday Effect in Gallium Nitride"
Duration: Sept 2015-May 2016
Placement: Currently a PhD student at Lehigh
2. Xiongliang Wei
Research topic (no thesis): "Quantum Dot Etching"
Duration: Sept 2015-May 2016
Placement: Currently a PhD student at Lehigh
3. Siyuan Guo
Research topic: "III-nitride Photonic Integrated Circuits"
Duration: Sept 2019- May 2020

Undergraduate researchers supervised:

1. Seth Slavin
Funding: Undergraduate Research Program
Research topic: Corrective Running Socks
Duration: Fall 2017- Spring 2018
2. Jasper Chumba
Research topic: Programing of an LED test station
Duration: Summer 2017
3. Alexander Goff
Research topic: Kilovolt Bias Tee
Duration: Summer 2017
4. Rebecca Lentz
Funding: Clare Boothe Luce Scholar Program
Research topic: Differential Carrier Lifetimes in III-nitrides
Duration: Summer 2017 – Summer 2019
Placement: PhD student at Univ. of Mich.
5. Mark Schafer
Research topic: Optical gain measurements
Duration: Fall 2019-Spring 2020
6. Chengxin Yu
Duration: Summer 2019 – Summer 2020
Placement: MS student at Univ. of Mich.

Post-doctoral associates supervised:

1. Benjamin Bryant
Location: Sandia National Laboratories and Univ. of New Mexico,

Research Topic: Differential carrier lifetimes in III-nitrides.

Duration: Sept 2013-July 2015

Placement: Avogy

Current employment: Alta Devices

Visiting researchers supervised:

1. Elly Tsai

Research topic: Light extraction in nanowire LEDs.

Duration: Sept 2016-Oct 2017

Placement: glo-USA

Current employment: Raxium
